

Zuplo API Gateway & Hydrolix/TrafficPeak

Zuplo x Hydrolix/TrafficPeak Integration Overview

Integrating Hydrolix with Zuplo as a logging solution enables scalable, high-speed data ingestion and real-time analytics, providing deep insights into API performance, usage patterns, and security events for enhanced optimization and decision-making.

About Hydrolix/TrafficPeak

Hydrolix is a streaming data platform designed to eliminate data anxiety by providing cost-efficient, high-performance querying and infinitely scalable infrastructure—without the complexity of fragile clusters or unmanageable scale.

About Zuplo

Zuplo API Gateway is a developer-first, serverless solution that simplifies API management by eliminating infrastructure complexity, enabling fast deployment and scalable, enterprise-grade performance, security, and flexibility.

Benefits of Using Zuplo & Hydrolix/TrafficPeak

➤ Real-Time Insights

Hydrolix enables ultra-fast querying of Zuplo logs, allowing teams to monitor API performance, detect anomalies, and troubleshoot issues instantly.

➤ Cost Efficiency at Scale

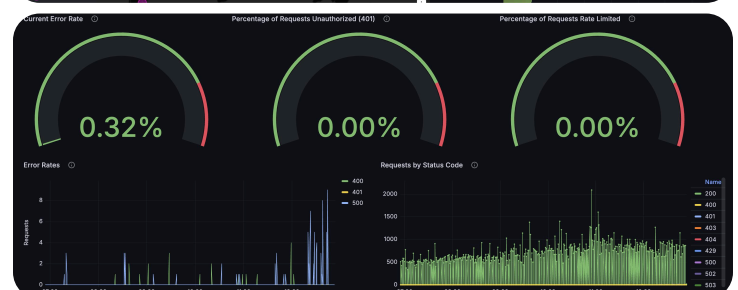

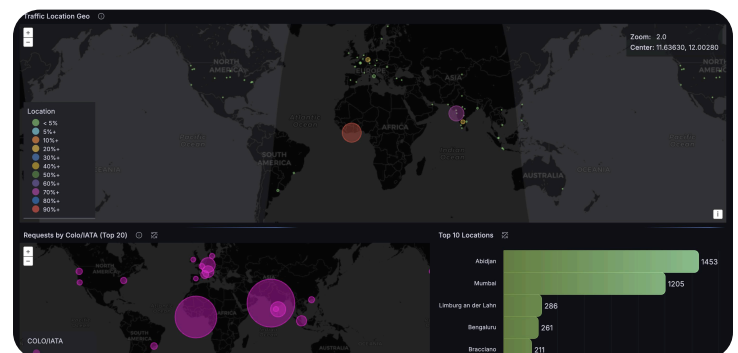

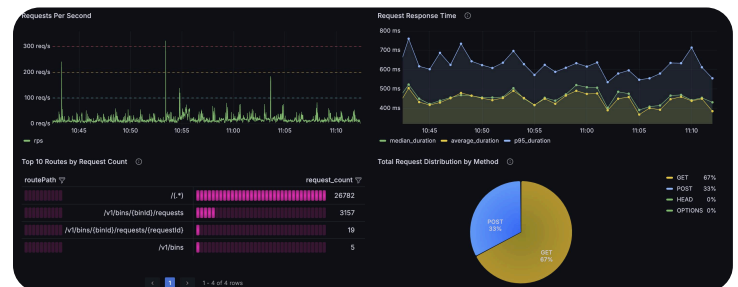

With Hydrolix's compression and low-cost storage, enterprises can retain high volumes of API logs without the skyrocketing costs of traditional logging solutions.

➤ Infinite Scalability

Hydrolix seamlessly scales to handle massive data ingestion from Zuplo, ensuring efficient log storage and sustained high performance.

➤ Advanced Analytics & Observability

Hydrolix provides powerful analytics tools to extract actionable insights from API logs, enabling better decision-making, security monitoring, and optimization.

Hydrolix can be used with Grafana to display dynamically updated charts and visualizations of Zuplo log data, as shown above. Templates are available for immediate use.
